

Volunteer Opportunity at the Schatz Energy Research Center

The Schatz Energy Research Center is dedicated to the development and implementation of clean and renewable energy strategies. Located on the HSU campus, the Schatz Center employs over thirty engineers and scientists who work on projects including global energy access, bioenergy analysis, electrical “microgrid” systems, clean transportation planning, and much more.

The Schatz Center’s outreach program brings energy and environmental awareness into the local community through on-site lab tours and programs, off-site classroom presentations, and participation in community events. Student docent volunteers are key to our outreach program, leading many of our presentations and tours. Docents teach about power and energy via hands-on activities and discussions tailored to age groups from late elementary through high school.

Docents:

- Enjoy working with diverse age groups
- Are comfortable with public speaking
- Have a background or strong interest in science or education
- Are able to volunteer 1-5 hours per week

Students in all majors are invited to apply. Familiarity with renewable energy technologies, experience working with youth, and fluency in Spanish, are all highly welcome skillsets. To learn more about the Schatz Center, visit schatzcenter.org.

Application Procedure

Submit a letter of application, a one-page résumé, and an unofficial transcript of academic coursework to Schatz Energy Research Center, Humboldt State University, Arcata, CA 95521 or via email to serc@humboldt.edu.

All applications must be received by 4 p.m. Friday, September 8, 2017.
